IMAGERY HAVING TECHNICAL EXPOSURE DATA STEGANOGRAPHICALLY ENCODED THEREIN

Abstract of the Disclosure

Technical exposure information (which may include film speed) is steganographically encoded into image data. The information may be encoded in accordance with pseudo-random noise data, and may be dispersed across the image, rather than being localized in a limited portion. In some embodiments, the encoding is such that the value of a single image pixel is changed in accordance with the values of several bits of information.
